

WHAT IS GOTÁ

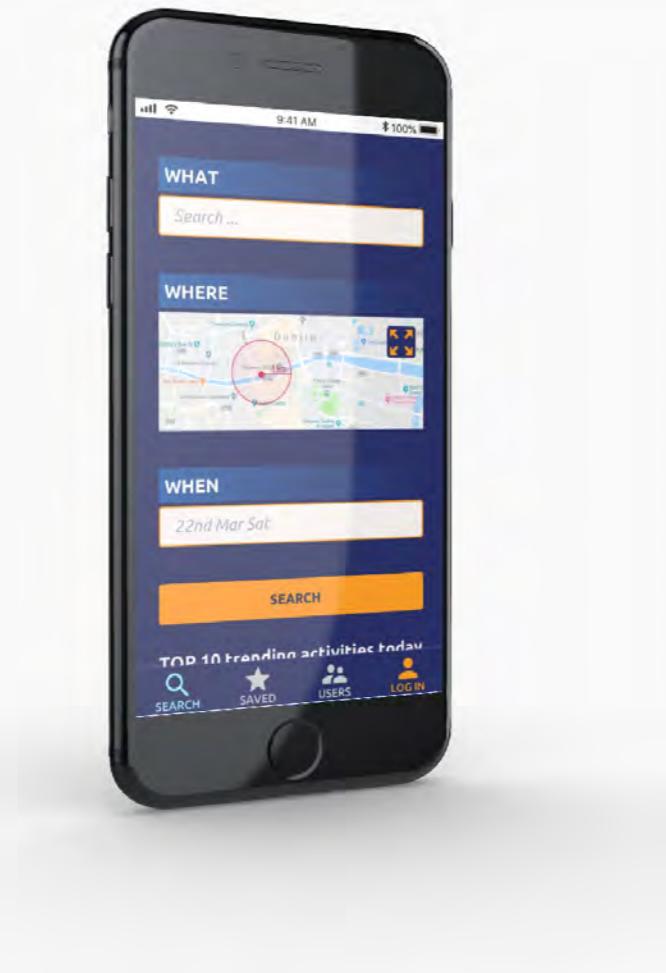

UX DESIGN STORY

SOAK IN THE EXPERIENCE

by Dariusz Biskupski

ABOUT THE APP

Get off the app (GOTA) is the application for finding various activities in the near vicinity, at most convenient time and with the most relevant theme. The idea came from my own struggle in finding events I am interested in. Moreover, I happen to discover such inconvenience was experienced by many people. I have initiated user centred design process I am introducing here which has ended with creating user interfaces for very unique event application, so needed on the market nowadays.

ABOUT THE AUTHOR

In the past 6 months I have participated in mentored online program lead by one of the recognisable UX/UI designers in Berlin's startups scene - Wojciech Hupert. Till then my experience was focused around building back-end apps (Ruby, Node.js) & front-end (JavaScript, CSS, HTML) apps.

In the effect of this intensive training I developed the following event application purely in UX process including user research, personas, journeys, wireframes, usability testing, UI design.

Along the way I acquired a tremendous amount of knowledge, mostly via cooperation with my mentor and multitude of people from different backgrounds whom I surveyed, interviewed and who tested my prototypes.

I hope you enjoy this reflection of my journey in the form of the following portfolio.

TABLE OF CONTENTS

1. RESEARCH & DISCOVERY

2. CONCEPT DEVELOPMENT

3. PROTOTYPING

4. USABILITY TESTING

5. DESIGNING THE APP

WHY ANOTHER EVENT APP?

OBSERVATIONS

The information about activities available in Dublin is scattered across a lot of different websites

156,000,000 results for googling “events in dublin february 2019”

There are many events not published

Current event apps are focused on selling events rather than matching user preferences with adequate activities, in the effect we have many lobbed events repeating

The details about events do not reveal important information at first glance, ie. how far from my location is it, what type of music, price.

There is no application showing events by location on a map or in the range

COMPETITIVE ANALYSIS

STRENGTHS

- A unique platform to find local events
- Community aspect
- Facebook & Meetup integration
- Calendar, Place & interest locating events algorithms

OPPORTUNITIES

- Better marketing strategy
- Let pubs, and all venues to publish their events on the app
- Include map showing events
- Improve people/events matching
- Improve UX/UI

WEAKNESSES

- It's only in India and some cities in USA
- Outdated UX/UI

THREATS

- Some similar apps slowly start popping up
- Local websites holding listing events

STRENGTHS

- Very popular
- Big audience
- WeWork investing in its expansion

OPPORTUNITIES

- Improve UX/UI
- Better integration with other online services
- Involve external institution to free event creations

WEAKNESSES

- Limited only to events created by users
- Fee for creating a group
- No map localisation
- Calendar & interests can get bit messy to locate events

THREATS

- Facebook plans about community creation and improving event experience

FINDING THE GAP IN THE MARKET

THE GOAL & MISSION OF MY APP

- Meet new people
- Enhance personal development over personal comfort
- Don't miss activities that you would love to attend
- Find events tailored to your personality quickly

NAME OF THE APP

"Get off the App" app - GOTA

(get off the screens, TV, couch, routine etc – get on to places, events, workshops, acquire skills & knowledge etc.).

POTENTIAL USER STORIES

As a user, I want to login to my account, so that I can see my saved preferences (ie. activities I like, one I signup for, see befriended users).

As a user, I want to choose what activities I am interested in so that I can see a list of relevant events going in town now.

As a user, I want to clearly see coming events as a grid so that I can quickly find what I need and save time.

USER RESEARCH

SURVEY

completed by 39 respondents

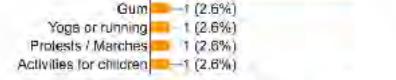

What type of events/ activities did you look for?

38 responses

Where do you look for ideas for activities/ events?

39 responses

What features would be of great value to you when looking for events/activities online?

30 responses

Notifications

Public Transport links, price of tickets, detailed time agenda

Notifications so I won't forget and based on my interest in order to reduce the volume of notifications of events I am not interested in. Would be great to have it also in advance to have the possibility to buy tickets (if any). I would extend also to a greater area so that a trip can be organized. Would also be good to know which ones among my friends is planning to go to the same event so we can keep in touch

Search by interest, put all that valuable Google data to use!

Time, location , gps, synopsis of event

Search by using voice,

interest

Interest / activity / location

Notification

Gathering all possible events from different websites together rather than having to scroll through several

INTERVIEWS

4 people from various social backgrounds

Interviewee 1 - Project Manager

"Couldn't find events on time and missed some of them."

Interviewee 2 - Technology Support

"Whenever I google for events, the results are spread across time and places. Some events are not updated, irrelevant or doesn't say much."

Interviewee 3 - Recent Graduate

"It is difficult to find the type of activity I want. Reviews are missing. Tripadvisor would be good but it shows hotels, restaurants, sponsored content."

Interviewee 4 - Managing Director

"Due to lack of time I am not attending many events. Music scene is saturated, but a space is for learning activities which I am not aware of many."

CONCLUSION

AFFINITY MAPPING

- There are multiple websites and apps that users use to find information about events & activities
- Almost all (if not all) websites and apps have the only feature: search by subject, date or place.
- There is a group of people that just don't go to events ie. lack of time, social anxiety, no friends are going there, not convinced they can meet like minded people
- People are very interested in finding things nearby
- Finding things by word of mouth is almost as frequent as google search
- It is easier to go out with friends than on your own
- Many people are just too busy to go out

SOME INSIGHTS

- No one offers all events in one place, so users have to look for events in different places (there is no skyscanner for events)
- Activities could serve to answer different emotional states, problems or goals while current event websites focus mainly on advertising about events
- No-one seems to offer features such as adding events to a calendar with search based on near location

USER PERSONAS

ABOUT
Cynthia just got married few months ago. She works in one of the corporations in Dublin, 9 to 5, Mon - Fri. She is living in Dublin for the past 15 years.

GOALS & NEEDS

- Plan a trip and go with friends every few weekends
- Meet new people, that have similar interests
- Learn more about Irish culture, photography and try new things etc

MOTIVATIONS

- Attend group events with people she knows so it's easier to get together with people
- Find events, hiking routes, live music she likes (symphonic power metal) easily in one place based on her interests
- Discover new cultural events she never tried ie. storytelling in pubs

QUOTES

"Unfamiliar people do not make things comfortable for me to go to an event"
 "I love nature, if people knew that just walking in nature is easing a lot the stress"
 "I would like to get exactly what I am searching rather than a mixup of everything, or in like in Facebook looking through 6 or so pages to find something"

AGE	33
JOB TITLE	Project Manager
STATUS	Married
LOCATION	Dublin

USER PERSONA

Cynthia

INTERNET HABITS

Google Search	● ● ● ● ●
Social Networking ie. Facebook, Meetup	● ● ● ○ ○
Value PC over mobile	● ● ● ○ ○
Specific websites ie. Ticketmaster	● ● ● ○ ○

PAIN POINTS

- She needs to spend a lot of time searching for ideas on dozens of websites
- She feels a lot of opportunities to meet people and do interesting things are escaping her attention
- She feels uneasy to attend workshops or other activities without knowing anyone there
- She feels that often people meet mostly to drink alcohol together and she doesn't like to drink

HOBBIES

photography, watching movies, hiking, travelling, music, meditation

ABOUT

Robert works over 50 hours a week. He works mostly during the night, every week on different days. He lives with his boyfriend for the last 5 years.

GOALS & NEEDS

- to meet people alike
- to do more healthy activities
- Wants to sort his sugar, coffee & smoking addiction problems
- to use my limited time on interesting things self development related or try new things

MOTIVATIONS

- to know what are the top 10 rated things to do in the area he is going to
- to know what events and activities are happening nearby
- to attend any workshops that would help me upskill

QUOTES

"I like the idea of searching by things by moods like on Spotify where I can search for music by moods"
 "I like to make spontaneous decisions as to what to do, like walking in a park, pub nearby or going to theatre"
 "It's not easy to find things as information is outdated. I usually got interested by someones recommendations or by seeing flyers or posters in the bus"

USER PERSONA

Mark

INTERNET HABITS

Google Search	● ● ● ● ●
Social Networking ie. Facebook, Meetup	● ● ○ ○ ○
Value PC over mobile	● ● ● ○ ○
Specific websites ie. Ticketmaster	● ● ● ○ ○

PAIN POINTS

- He has very little time on hand during the week
- He notices the events scene is very saturated, hard to pick up hidden gems.. Especially in music

HOBBIES

golf, reading, hiking, playing guitar, live

ABOUT

Mark is a Dubliner working. As the Managing Director he stays long hours in the office. He has two children.

GOALS & NEEDS

- to use his spare time better over the weekend with family on some activities
- to do more creative things with people like occasionally playing with choir
- to have more relaxing or learning opportunities ie. nutritionist workshop

MOTIVATIONS

- to be involved more with the local communities
- to spend time with his family on various activities

AGE	24
JOB TITLE	Security Guard
STATUS	Single
LOCATION	Dublin

Based on the finding from affinity mapping, I have created three personas that are representing the most frequent occurrences and characteristics of the potential users. I will focus on Cynthia in this presentation.

USER PERSONA

Rob

INTERNET HABITS

Google Search	● ● ● ○ ○
Social Networking ie. Facebook, Meetup	● ● ● ○ ○
Value PC over mobile	● ● ○ ○ ○
Specific websites ie. Ticketmaster	● ● ○ ○ ○

PAIN POINTS

- He has very little time due to frequent overtimes
- He feels that searching for events and ideas take a lot of time as information is scattered all over
- He missed some interesting workshops as didn't know about them in time

HOBBIES

hiking, web design, art, computers, travelling, hiking, cinema

ABOUT

Robert works over 50 hours a week. He works mostly during the night, every week on different days. He lives with his boyfriend for the last 5 years.

GOALS & NEEDS

 "I like to make spontaneous decisions as to what to do, like walking in a park, pub nearby or going to theatre"
 "It's not easy to find things as information is outdated. I usually got interested by someones recommendations or by seeing flyers or posters in the bus"

USER JOURNEY

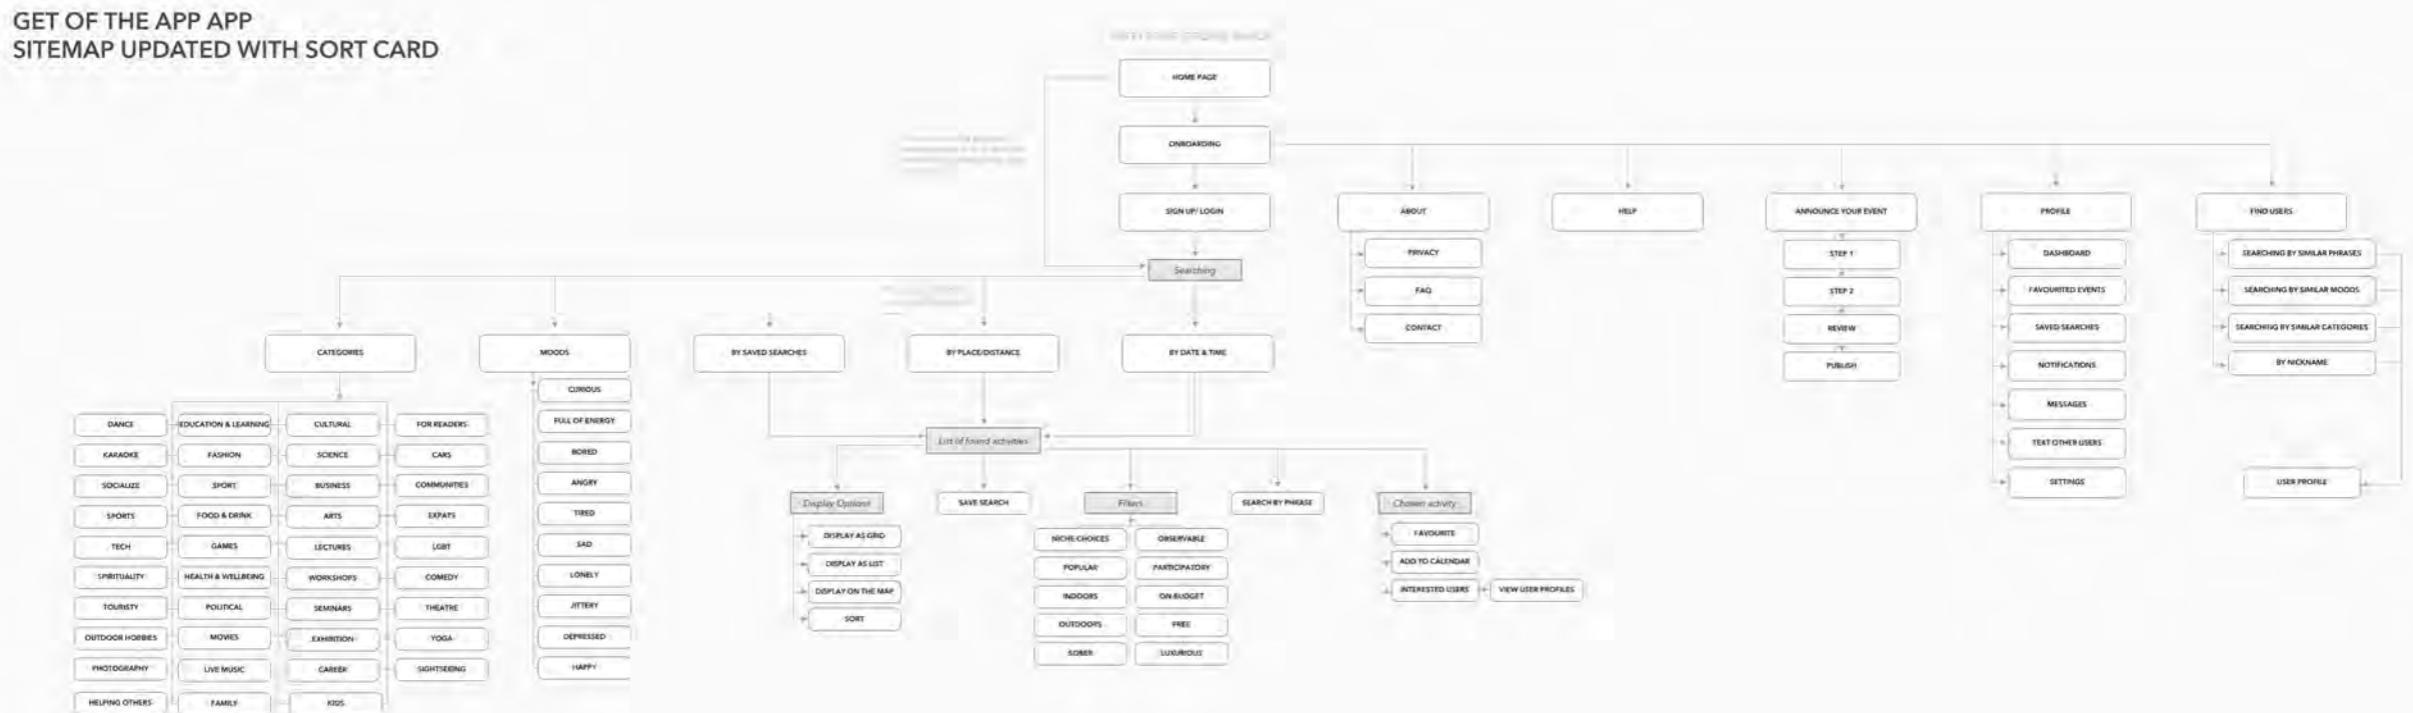

USER FLOW

Here are the main tasks that Cynthia passed on her journey.

SITEMAP

This is the information architecture I created to visualise the pages and navigation flow in my web application **GOTA**.

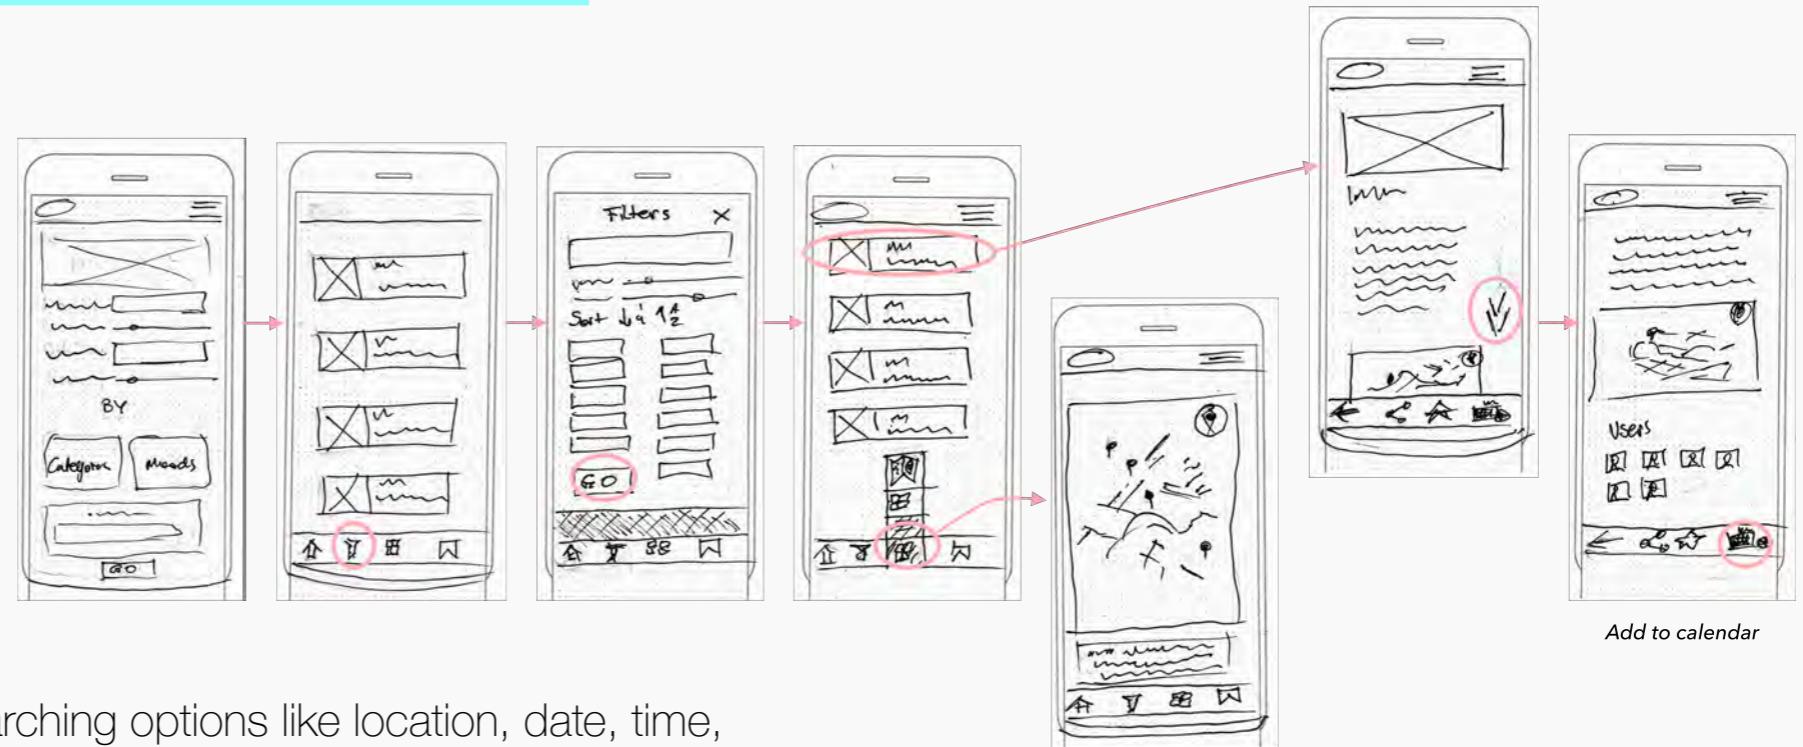

I created few sitemaps, this one is final iteration updated with **OptimalSort** card sort study that I launched on Sep 23 2018. I invited 5 people to group about 30 cards representing themes, categories ie. yoga, jazz, food festival, sober etc.

In order to simplify previous sitemaps and solve a dilemma of multitude and complexity of categories and subcategories, moods and see how people associate and match various subjects.

LOW-FIDELITY WIREFRAMES

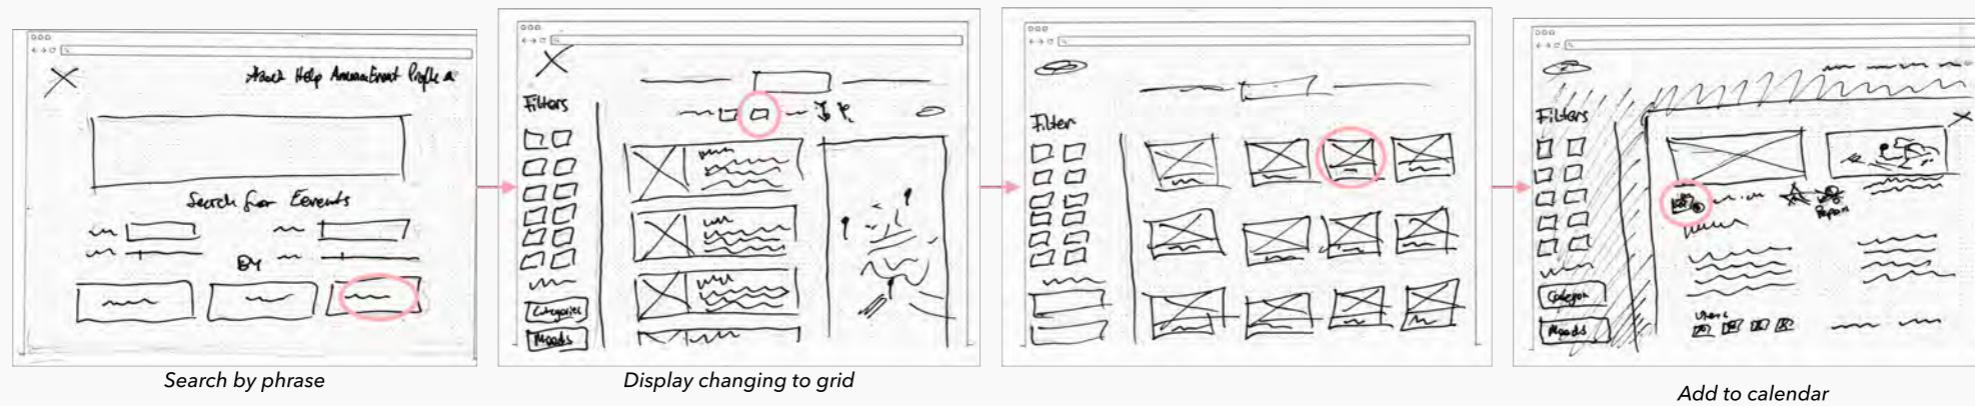

Based on personas, user flow and sitemap, I have started making first sketches. Here is the result of this iteration.

The home screen contains searching options like location, date, time, distance from user location, time range the events are in. I have made bigger buttons for moods, categories & phrases and these are alternative ways of pre-search filtering.

Once the search is set, the results show a list of events. Third screen shows additional menu with a filter to adjust ie. distance, edit or add the phrase or turn on extra filters. Fourth & fifth screen display results as list or map. The last screen is showing the chosen event.

The desktop version is taking advantage on extra space available so the search results are accompanied by a map and filters, while grid display by extra info under the thumbnails . The last screen is a modal with event details.

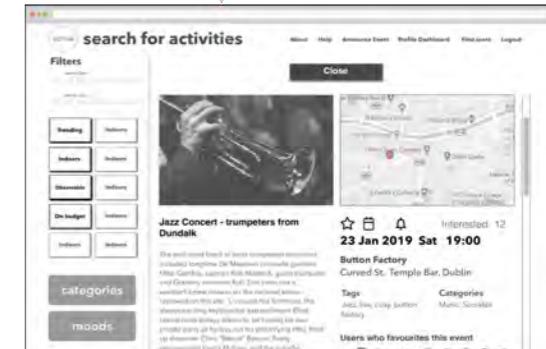

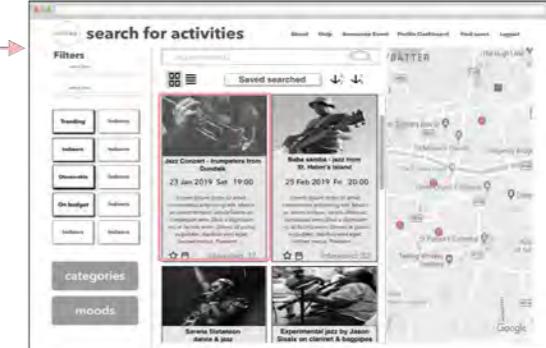

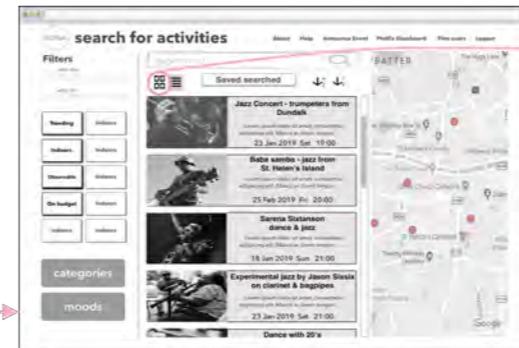

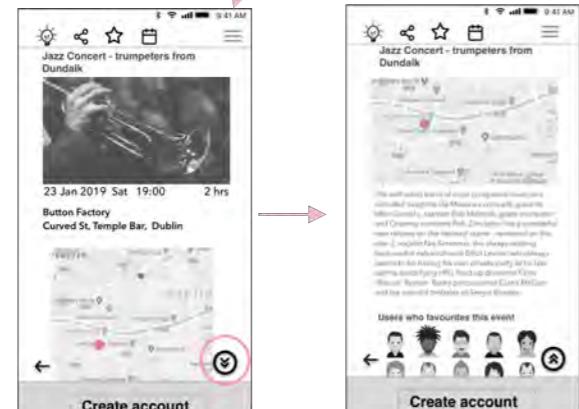

HIGH-FIDELITY WIREFRAMES

Searching for events.

After iterative redesigning, correcting according to usability heuristics and user journey, I created mid-fidelity wireframes using sketch & Balsamiq Mockups to finally come with the following high-fidelity wireframes via Sketch.

Added screens including wheel of moods & square of categories.

All uploaded as prototypes via

USABILITY TEST PLAN

PLAN HIGHLIGHTS

In the following iteration I tested the application with 6 users (desktop & mobile version). I have prepared the usability test plan along with the script. After sending official invitation and receiving signed consent forms, I have conducted 4 moderated in-person tests and 2 moderated remote tests.

I have recorded all 6 sessions via Hi-Q mp3 recorder app on Android, and additionally captured in video 3 sessions with Quicktime Player.

All sessions tested high-fidelity prototypes in

TEST OBJECTIVES

- Check if people understand and know how to search and find desired events
- Check if they understand what announcing an event is for?
- Check if they understand how finding users can benefit them
- Observe how users navigate and behave, are they finding what they looked for, any pain points?

GOAL

The goal of this testing is to assess the satisfaction, efficiency and learnability of this app. I would like to evaluate if users can quickly understand the app, how to complete basic tasks like searching for events, creating event and if satisfy their need to find events for themselves - how they would approach it and if any errors are faced during the app exploration.

USABILITY TEST RESULTS

I then created affinity map of all comments, sorting them and organising

USABILITY TEST - REPORTING FINDINGS

RAINBOW SPREADSHEET EXCERPT

Following Tomer Sharon technique of organising usability test observations and Jakob Nielsen's technique of 4 step rating scale, I have created the recommendations & potential solutions. In this presentation I focus on errors.

		Device	P1	P2	P3	P4	P5	P6	Total	Possible solution	Notes
E R R O R S	Personality test in profile - I don't understand, do i take test or ask questions?	DM							6	Considered replacing personality tests with extended profile information, to focus purely on activities searching rather social side	(Error Rating: 4)
	User couldn't find a price or information about if it's free, ticket price or sold out. Stops from making further decisions	DM							6	Priority to add information if it's free or the price for ticket and possible link to where to buy it. Update in announce event required too. In the future potential for selling tickets via theis app	(Error Rating: 4)
	Categories on the desktop home page are extremely small, hardly see what is in there	D							4	Increase the font, rearrange	(Error Rating: 4)
	Description of the event was not visible as didn't scroll down, didn't know the information was below the map	M							2	Consider adding dropdown boxes for map, description, address etc	(Error Rating: 2)
	Number 12 confused on event page, as it didn't reveal it's about 12 people interested	D							1	Add short description	(Error Rating: 4)
	What is that numerical sort? If it's fo dates, it's not clear why numerical.	DM							2	Replace icon with date related sort	(Error Rating: 3)
	If I can modify everything in the profile, it is great then (no sign of how to edit!)	M							2	Add edit icons	(Error Rating: 3)
	2 hours on event page is not clear at all, is it form now or how long the event lasts	M							1	Add short description	(Error Rating: 3)
	I am not sure what is the profit of having an account	DM							1	Create notice messages for inactive features, add help tutorial to the begining	(Error Rating: 3)
P O S I T I V E E Q U O T E S	Didn't notice the difefrence on the page after signing up (just the menu changes, as the page is the same as the main)	M							2	Add profile icon rather menu	(Error Rating: 1)
	Moods were not clear, not sure what to choose and how this links with search	DM							4	Replace actual feelings with suggested responses to various feelings	(Error Rating: 4)
	I don't know what it is as there is no title (no intro started)	M							1	Highlight the name slightly in menu or main UI	(Error Rating: 2)

		Device	P1	P2	P3	P4	P5	P6	Total	Possible solution	Notes
P	I like searching by moods	M							2		
O	I like I can search for events without being signed up	M							1		
S	I like I can stare & share an event with other people ie. whatsapp	M							3		
I	I like the filtering options ie. on-budget, or the fact it narrows down the results	M							4		
T	I like I can find people searching for similar things	M							1		
I	The events page look simple to use	M							3		
V	Announce event on desktop is very clear	D							2		
E	I like this app overall, it's original and helps to find events	DM							1		
E	The map near the list of events is great	DM							3		
Q	I like there is many categories ie. science could bring me to planetarium? - it would be nice, LGBT – nice, tech - nice -I love it, games, career - amazing, so possibly it will take me to recruitment fair etc and I can take my CV there etc.	D							2		
U	Welcomed the fact that can leave message to another user	D							1		
O	Intro is good as long as it shows once and never again	M							2		
Q	I like the distance slider so I can select place I am going to as I want to walk so short distance.	M							2		
T	I like I can quickly signup with google	DM							1		
E	Found users look interesting to him	DM							1		
S	I like I can see who else is going	DM							1		

USABILITY TEST - RECOMMENDATIONS

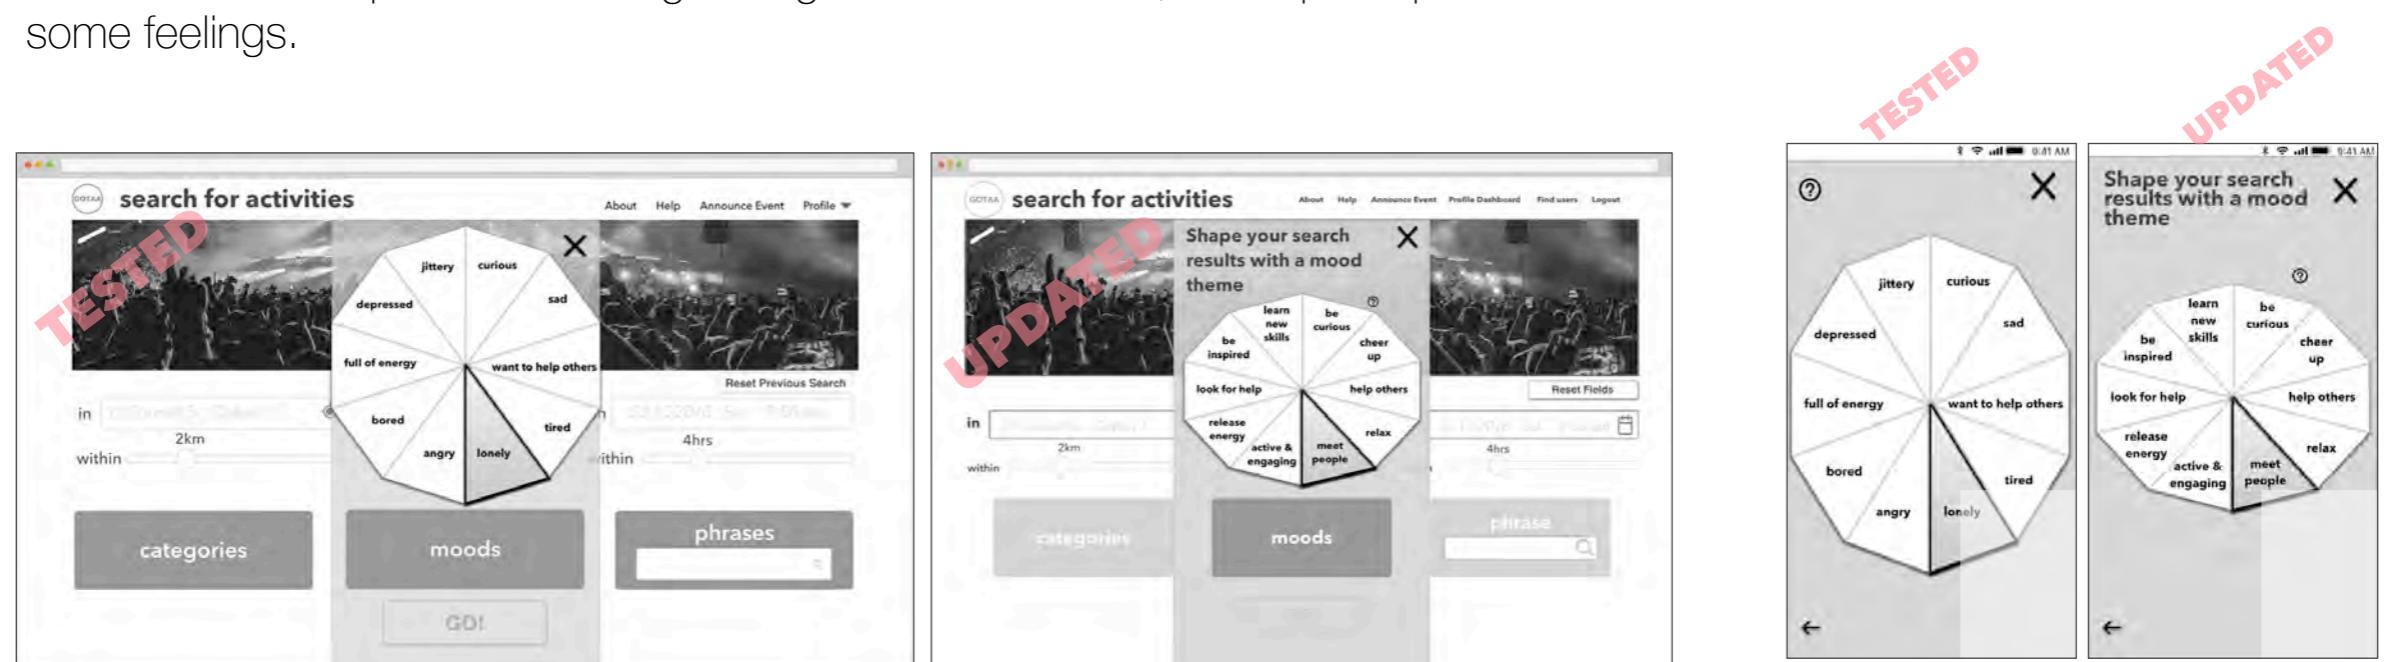

... first of the issues fixed and reported.

Issue 4: “Moods were not clear, not sure what to choose and how this links with my search”

Error rates as 4 according to Jakob Nielsen’s four-step rating scale. Four participants pointed this issue. It is crucial feature and causing lot of confusion. Moreover many other issues are affected by this like too many negative feelings exposed or how to search in future event with a current feeling.

Suggested Change: Replace actual feelings with suggested responses to various feeling. Consider using ie. drama instead of sad, relaxing instead of tired, curious into learning, jittery & depressed into personality development etc.

Evidence: All participants didn’t understand this functionality. At various points it also confused understanding of other users like problem of using feelings for future events, some participants were unclear as to how name some feelings.

EXAMPLES

The screenshots illustrate the application's visual style across different sections:

- SEARCH RESULTS:** Shows a grid of event cards with images, titles, and dates. A map is integrated on the right side.
- PROFILE:** Displays a large profile picture, an email address, and a summary section with icons and text. It also includes a sidebar with navigation links like "About me", "Hobbies", and "Frequent searches".
- SETTINGS/PREFERENCES:** Shows a sidebar with categories like "Books I read", "Hobbies", and "Favourite music", each with a list of items and small icons.

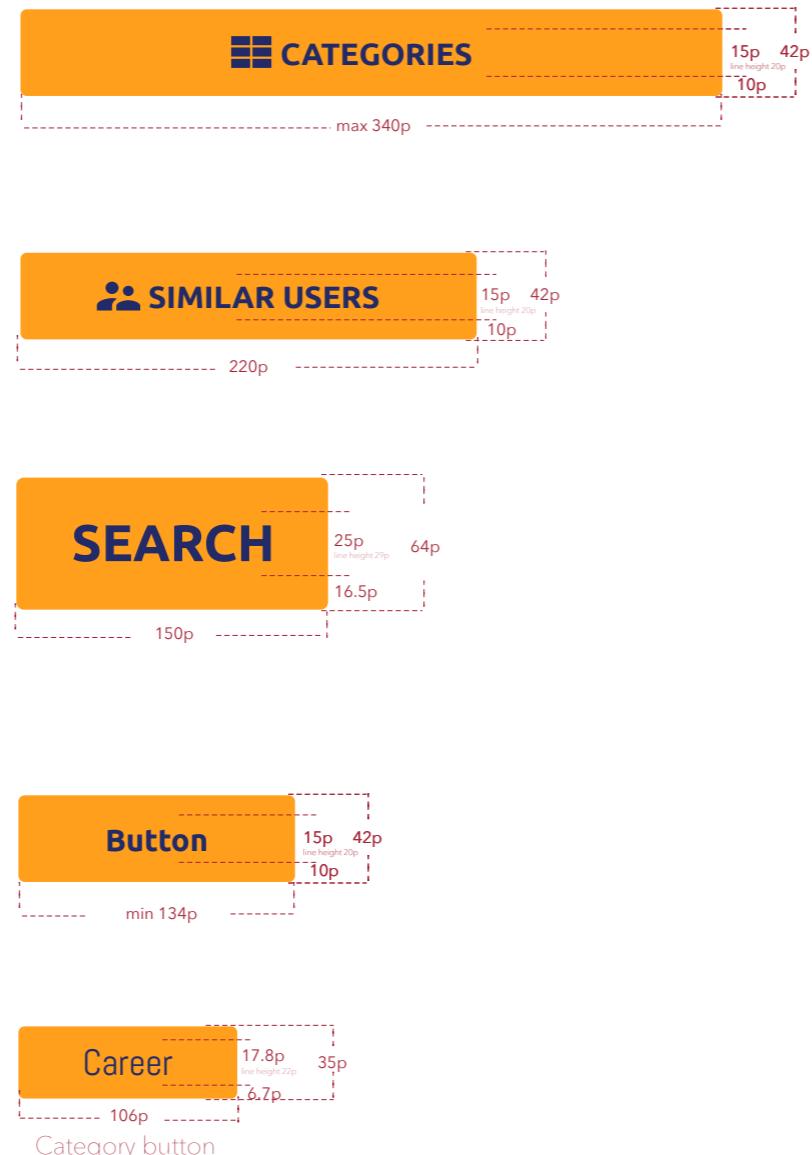

UI ELEMENTS

BUTTONS

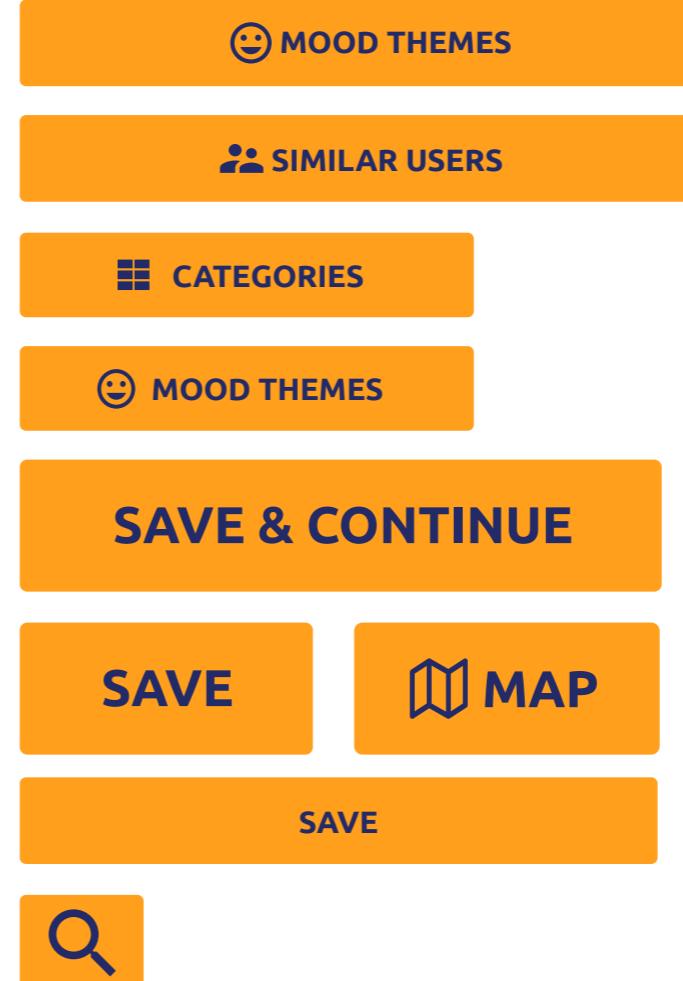

actions

specs

types

LOGO EVOLUTION

Get off the app or Go to Action - 1st attempt. I tried to make letter "O" as the gate which crossing is like getting out of the comfort zone -try something new, new activities.

Outcomes - *it felt a bit gloomy, misaligned*

Action is symbolically contained in graphical picture of heart beat with arrow pointing in letter A outward as for action, direction, guidepost...

Outcomes - *when logo is small, the orange line is barely visible. Too thick line also impacts balance of the logo*

Another attempt, balanced, creative and playful but not visible and confusing in message

The final logo on white and blue background. Action in the app is in crayons and in the app every element in crayons "calls for action".

The visceral experience of the app I enhanced by vibrant colours, which distinguishes it from other similar apps. The main colours are orange (crayola) and dark blue (St Patrick blue).

ST. PATRICK'S BLUE

#222A68

CRAYOLA

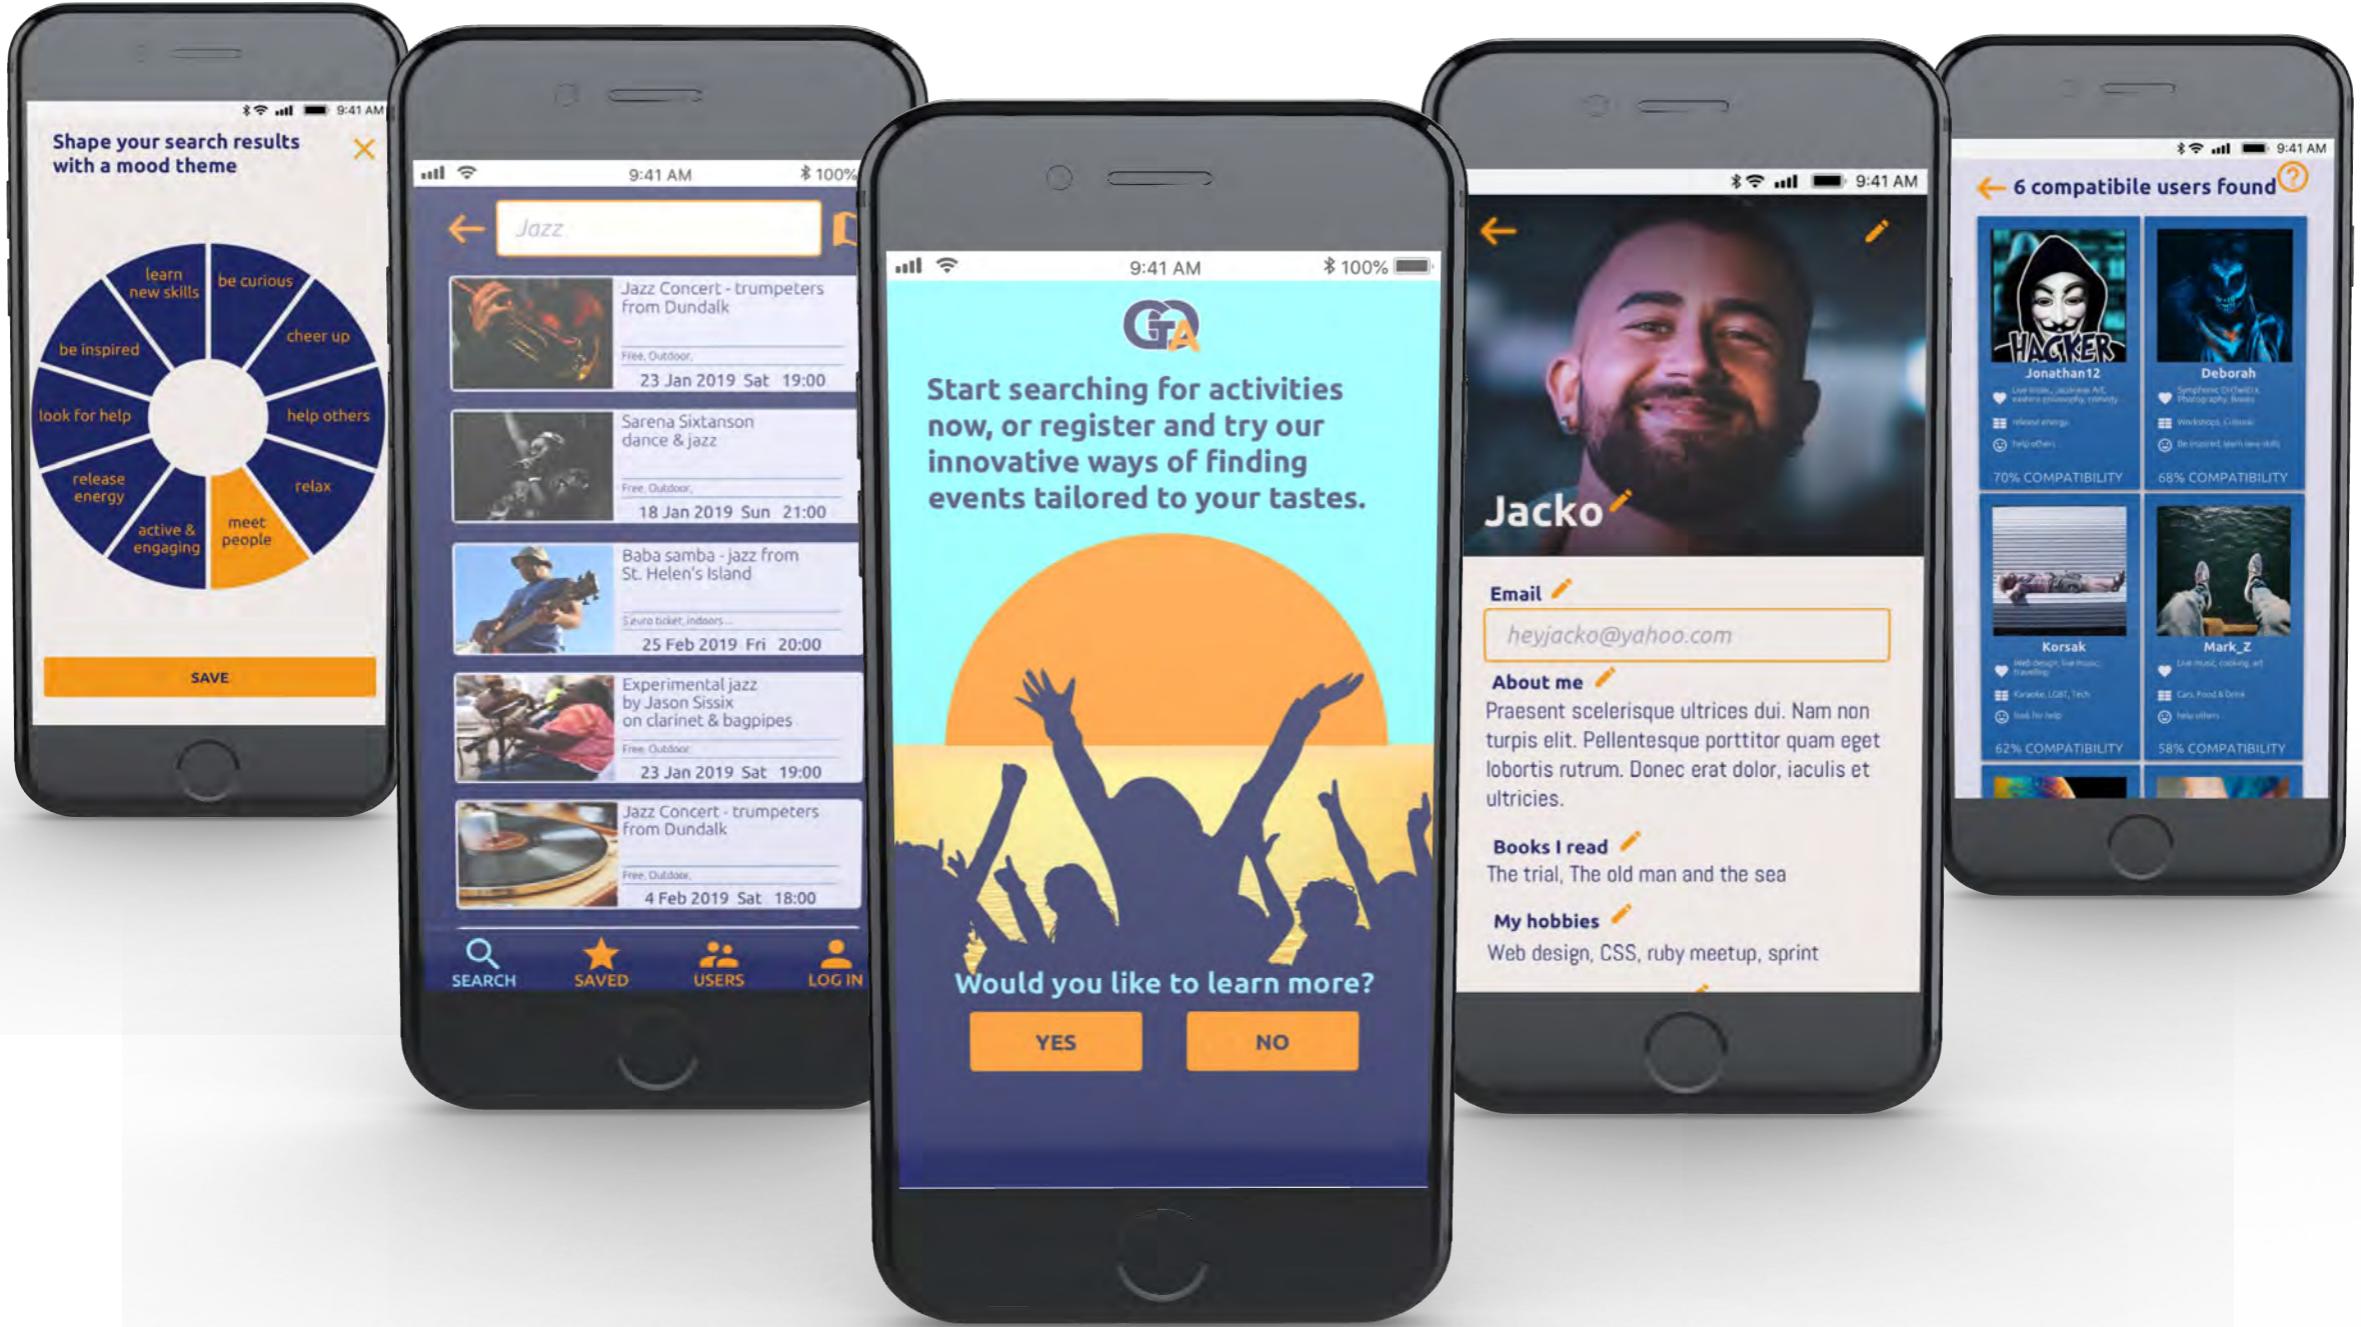

#FF9F1C

Orange is the playful, encouraging & adventurous colour triggering exciting and vital feelings. It is used often in US basketball team logos, Amazon, Mozilla Firefox, Nickelodeon, Timberland and various products for creative arts for kids. Its playful tone is soothed with dark blue that on its own brings serious, sombre & knowledgeable connotations.

MOBILE DESIGN - FINAL MOCKUPS

After numerous iterations based on rich amount of feedback from the tests, I made numerous adjustments..

All prototypes (36 screens) are ready to use on <https://invis.io/C6QVCDLAR4Z>

DESKTOP DESIGN - FINAL MOCKUPS

All prototypes (28 screens) are ready to use via <https://invis.io/QYQVCI05KRJ>

The image displays six desktop mockups of a user interface for a social networking and activity platform. The top row shows the home screen with a mood theme selector (e.g., 'be inspired', 'relax'), an event calendar for Dublin, and a profile page for a user named 'Jako'. The bottom row shows activity search results for 'Jazz', event details for a jazz concert in Dundalk, and another profile page for 'Jako'.

JAZZ CONCERT - TRUMPETERS FROM DUNDALK

2 hours in total

MUSIC, SOCIALIZE

INDOORS, OBSERVABLE, TRENDING

The well-oiled band of most competent musicians included longtime De Mesones' comrade guitarist Mike Gamble, saxman Rob Maletick, guest trumpeter and Grammy nominee Rob Zinn (who has a wonderful new release on the national scene – reviewed on this site –), vocalist Nia Simmons, the always exciting keyboardist extraordinaire Elliot Levine (who always seems to be having his own private party as he lays out his electrifying riffs), fired up drummer Chris "Biscuit" Bynum, flashy percussionist Curtis McCain, and the colorful timbales of Sergio Rosales.

5 USERS WANTS TO GO

REVIEWS

Shabaka Hutchings is easily one of the most interesting bandleaders of the past decade. He deals in shape-shifting sax and clarinet, but it's his carefree approach to other genres that's established him as a musical outlier who's rattling rigid jazz traditions.
